AMERICA'S PRIDE
12 ft. Pictogram # 1075-11"

1075

We, at MeadowLyon Designs, hope you'll enjoy this very patriotic pattern. Being Military wives, we are keenly interested in our troops and their welfare. Thank you for bolstering their courage in this and so many other ways. For downloading, we have arranged the pieces of this Pictogram roll pattern so that they overlap slightly to help you align the pattern. It is important to place all the sections in a straight line following the guidelines at the top and bottom of the pattern. Taping them together along the straight edge of your quilting machine table would be ideal. If that is not available arranging them along the edge of a long straight table or even a yardstick would be important.

We give permission for you to re-size these pages as needed.

Aligning MeadowLyon Pictograms:

Congratulations! You've purchased a "Pictogram" - MeadowLyon's unique 12 ft. non-repeating roll. You'll have lots of pictorial material from which to choose. Its four panels can be arranged to create a scene, of sorts, on a wall hanging or small quilt. Also, extended rows can be repeated above or below to cover a quilt with Edge-to-Edge quilting.

We recommend starting alternate rows at the beginning of a different panel each time. This will prevent the motifs from standing on top of themselves. Of course you can start alternate rows wherever you like. Our registration system prevents upper and lower rows from touching when you slide the pattern in increments of 3 inches; eg. 3", 6", 12" etc.

For accurate placement, align the bottom line* (or dots or corner points) to the previous top line. You might do this by lowering the needle at the exact top right hand corner of the panel recently completed, then inserting a pin at that point. Roll the quilt and after shifting the pattern and replacing the clamps, move your needle once again to that point and adjust the laser to the lower right corner of the new panel.

Caution: if you leave a space there will be a space - it's best to match the lines with your laser, then slide the machine across the quilt to see if any stitching falls above the line and adjust slightly if needed.
